

Project Work Summary

Freelancer.com Project #40341249 | Zen Cart SEO & Crypto Trading System
Client: Guido Paolo Leban (glebor) | Freelancer: Anirudha Talmale
Period: April 2026 - June 2026 | Generated: June 20, 2026

Executive Summary

This document itemizes all work delivered on Freelancer.com Project #40341249. The project began as a Zen Cart SEO/Sitemap installation and expanded to encompass a full-scale crypto trading system: 50+ Flask-based trading bots on a Hetzner VPS, security incident response, dashboard development, trading logic fixes, and ongoing server maintenance. Each item below is listed with a brief description and its estimated market value based on standard freelance rates for equivalent work.

Total work items: 56
Total estimated market value: \$13,350 USD
Total paid: \$499.00 USD
Difference: \$12,851 USD

Itemized Work Delivered

ZEN CART E-COMMERCE STORE (micropdr.com)

Task	Description	Market Value
Ultimate SEO URLs Module Installation & Configuration	Installed SEO URL module on Zen Cart 5.1. Fixed .htaccess RewriteBase, configured punctuation filtering, verified clean URLs for all products/categories/info pages. Italian-language URL slugs.	\$200
XML Sitemap Generation & Configuration	Built custom sitemap generator with 62 URLs. Configured priority levels (products 0.9, categories 0.7, static 0.5). Auto-regeneration via cron daily at 3 AM. robots.txt updated.	\$150
PayPal Express Checkout Integration	Added PayPal Express Checkout button to product pages in multiple locations (near price, bottom, floating). Aligned with existing WhatsApp button. Custom CSS positioning.	\$200
CKEditor 4 Rich Text Editor Installation	Installed CKEditor for admin panel product/category description editing. Replaced default Zen Cart editor.	\$100
SMTP Email Configuration	Configured outgoing SMTP for order confirmations and contact form. Tested deliverability.	\$75
Google Shopping Product Feed	Built custom PHP Google Shopping XML feed (google_shopping_feed.php) with all required fields, product availability, pricing, images, and categories.	\$250
Admin Panel Password Recovery & Access Setup	Reset admin credentials via database, configured secure access path.	\$50
Product Page Layout & Button Alignment Fixes	Multiple iterations of PayPal/Cart/WhatsApp button positioning across desktop and mobile. Floating button alignment, responsive adjustments.	\$150
Guest Checkout & Registration Page Customization	Modified checkout flow, registration form fields, template customization for guest vs registered users.	\$100
Recently Viewed Products Sidebar Widget	Implemented recently_viewed_tracker.php and sidebar display with cookie-based tracking.	\$100
Category Subtotal		\$1,375

CRYPTO TRADING SYSTEM - INFRASTRUCTURE & SETUP

Task	Description	Market Value
Server Migration Planning (CAX11 to CPX42)	Planned migration from Hetzner CAX11 ARM (2 vCPU/4GB) to CPX42 AMD (8 vCPU/16GB/320GB). IP whitelisting, DNS, service migration strategy.	\$200
Shared Binance Cache Service Architecture	Architected and maintained binance_shared_cache.py: centralized price cache (cache.json), portfolio data (binance_portfolio.json), orderbook cache. Read by all 40+ bots every 30 seconds.	\$400
Systemd Service Management (98 service files)	Created, configured, and maintained 98 systemd service files for all bots, dashboards, and infrastructure. Auto-restart policies, proper dependencies, staggered restarts.	\$300
UFW Firewall Configuration & Port Management	Configured UFW rules for 50+ ports. Added/removed rules as ports were created/migrated. Security hardening after attack.	\$150
Full Server Recovery Backup System (Port 9996/9997)	Built Flask-based backup download server. Created 5+ full server backups (2.4-3.4 GB each). SHA256 verification. Disaster Recovery Guide. Archive server management at 46.224.58.82.	\$350
Secondary Archive Server Setup (46.224.58.82)	Configured backup archive storage on secondary Hetzner server. SCP transfers with SHA256 verification. Maintained backup rotation.	\$150
SSH Key Pair Generation for Third-Party Access	Generated ED25519 SSH key pair, configured authorized_keys on both jump host and trading server. Created connection instructions for Windows/Linux.	\$75
Server Performance Monitoring & Optimization	Ongoing RAM/CPU/Swap monitoring across 39+ Python processes. Identified memory leaks, managed staggered service restarts to control 3.7GB RAM usage.	\$200
Category Subtotal		\$1,825

SECURITY INCIDENT RESPONSE & SYSTEM HARDENING

Task	Description	Market Value
Security Incident Investigation & Response (POINT 1)	Investigated external attack from 163.7.3.220 (BytePlus/ByteDance Singapore). Traced attack path: external scanner -> port 9999 -> localhost -> port 5065 close-all. Identified all accessed endpoints and damage scope.	\$400
Port 9999 Full Authentication System (POINT 2)	Added password + security question authentication to ALL endpoints on Strategy Dashboard. Session-based auth with timeout. Previously fully open.	\$300
Port 5065/5066 Stealth System Hardening	Blocked destructive endpoints (close-all, close-position, remove-position) from localhost access without session auth. Eliminated the attack chain vector.	\$250
Full Port Security Audit (50+ ports)	Audited all 50+ ports for exposed endpoints, destructive operations, authentication status. Documented risk levels and remediation plan.	\$300
Authentication Deployment to All Bot Ports	Deployed session-based authentication to all 43+ bot dashboard ports per client request. Login with password + security answer on every port.	\$400
Attacker IP Blocking & Forensic Analysis	Blocked attacker IP via UFW. Analyzed access logs to determine attack timeline, accessed endpoints, and potential data exposure. Confirmed no API key or SSH compromise.	\$200
Category Subtotal		\$1,850

TRADING LOGIC BUG FIXES & CORRECTIONS

Task	Description	Market Value
Cost Basis Calculation Fix (POINT 3)	Fixed Stealth TP/SL manager (port 5065) cost basis calculation. Old code counted buys only; new code accounts for all buys AND sells from Binance history (spot + convert + fiat). DGB invested corrected from 16,328 to 5,658 USDT.	\$350
Hardcoded 100 USDC Minimum Removal (POINT 5/7)	Removed arbitrary 100 USDC minimum trade threshold from all 43+ ports. Bots now use configured trade amount and let Binance enforce its own minimums.	\$200

Task	Description	Market Value
USDC-Only Pair Mode Fix (POINT 9) - Initial	Fixed pair_mode='usdc' to truly skip coins without USDC pairs. Blocked Convert fallback in USDC-only mode. Applied to ports 4022-4030 with 30-second staggered restarts.	\$300
Convert Fallback Bug Fix (POINT 16) - Comprehensive	Discovered and fixed 11-12 unguarded Convert API calls in trader.py error handling paths. When a USDC spot order failed, error handlers bypassed pair_mode check and fell back to Convert. Applied to all 30 USDC-only ports with individual backups and syntax verification.	\$500
Binance Convert 'PROCESS' Status Handling Fix	Fixed Convert API to properly poll for up to 30 seconds on 'PROCESS' status instead of treating it as failure. Prevented silent USDC-to-EUR conversion losses.	\$200
Duplicate Process Detection & Cleanup	Identified and killed rogue manual bot processes running alongside systemd-managed instances. Ensured single-process operation per port.	\$100
LIVE/DEMO Mode Consistency Fix (POINT 10)	Found root cause: dashboard mode switch updated monitor's live_mode flag but NOT trader's live_mode flag. Both must be True for live trading. Fixed the propagation chain.	\$300
Port 9023 LIVE Mode Fix	Diagnosed port 9023 trading in DEMO despite config set to LIVE. Root cause: config read at startup only; service needed restart after config change. Documented this behavior for client.	\$100
Stop Loss Slippage Investigation (POINT 12)	Investigated SAHARAUSDT SL 7% executing at -13.25%. Analyzed execution timing, WebSocket price feed delays, and market volatility impact on SL execution.	\$150
Category Subtotal		\$2,200

DASHBOARD & UI DEVELOPMENT

Task	Description	Market Value
Strategy Comparison Dashboard (Port 9999)	Maintained and enhanced multi-port aggregation dashboard. Reads all bot SQLite databases, shows P&L; comparison, journal entries. Excludes port 5066 from totals to prevent double-counting.	\$400
USDC Portfolio Card System	Added USDC PORTFOLIO card to all ports. Calculates Total Binance minus port 7081 EUR positions. Added 5 individual cards (USDC INVESTED, USDC FREE, EURO PORTFOLIO, EURO INVESTED, EURO FREE) on ports 9000-9012 and 9999.	\$300
3-Tab Configuration System (POINT 8/13)	Built 3 configurable dashboard tabs (MAX DURATION, COIN COOLDOWN, GLOBAL COOLDOWN) on port 2043. Then deployed incrementally to 30+ ports with per-port verification and screenshots.	\$500
Compound Trading Mode Feature (POINT 14)	Implemented COMPOUND YES/NO toggle on dashboards. When YES, next trade = base amount + previous P&L.; Auto-forces MAX_SIMULTANEOUS=1 in compound mode. Deployed to 28 ports.	\$400
API Management Dashboard (POINT 15)	Built web-based API key management panel. View and configure Binance API credentials from browser without SSH. Deployed to 41+ ports with /api/account-info endpoint.	\$500
Close Trade Endpoint Development (POINT 11)	Developed /api/close_trade POST endpoint for individual trade closure from Dashboard 9999. DEMO mode uses last WebSocket price; LIVE mode executes real Binance market sell. Tested and documented.	\$300
Conditioned Monitoring UI (Port 9999)	Maintained conditioned monitoring popup with MAX/MIN EUR thresholds. Button color indicator (blue=inactive, green=active). Portfolio value integration from port 9000.	\$150
Dashboard Monitoring & Configuration Tabs (POINT 8)	Added MONITORING tab (real-time internal state) and CONFIGURATION tab (all loaded settings) to port 4022. Auto-refresh every 5 seconds. All values from running bot, not static.	\$200
Port 4045 to 4044 Migration	Migrated bot from port 4045 to 4044 to resolve Chrome ERR_UNSAFE_PORT. Updated config, UFW rules, Dashboard 9999 references.	\$100
Dashboard 9999 Port Management	Multiple updates to PORTS list, journal ports, and labels on Dashboard 9999 as ports were added, renamed, or migrated.	\$100

Task	Description	Market Value
	Category Subtotal	\$2,950

STEALTH TRADING SYSTEM (Ports 5065/5066)

Task	Description	Market Value
Stealth TP/SL Manager (Port 5065) - 5 PnL Bug Fixes	Fixed invested_usdt calculation, EUR conversion logic, spot trade filtering, tp_amount calculation, and bidirectional percentage/amount handling. Auto-sync with Binance wallet.	\$400
Manual Trading Panel (Port 5066) - Order Entry System	Maintained Binance-style order entry: Market/Limit Buy/Sell, pending orders with TP/SL, coin list with click-to-select. Pending orders stored in stealth_pending.json.	\$300
Emergency Close-All Security Fix	After security incident, restricted close-all endpoint to require authenticated session even from localhost. Prevented cascading damage via proxy attacks.	\$200
	Category Subtotal	\$900

BOT CLONING, CONFIGURATION & DEPLOYMENT

Task	Description	Market Value
Crash Detector Bot Variants (15+ ports)	Configured and maintained 15+ crash detector variants with different parameters (drop thresholds 5-15%, TP 4-7%, SL 4-7%, durations 30min-2hr). Ports 1043-1044, 4029-4030, 4039-4050, 9009-9058.	\$400
Convert-Only Bot Configuration (8 ports)	Set up and maintained 8 Convert-only bots (pair_mode='convert') using Binance Convert API via EUR intermediary. Ports 2037, 4032-4038, 4443, 5053.	\$200
USDC-Only Bot Configuration (30 ports)	Configured 30 bots for strict USDC pair trading. Applied pair_mode guards, verified no Convert fallback paths.	\$200
Volume Pump Detection System (Ports 9000-9012)	Maintained volume pump detection: 1-minute kline monitoring for 300 coins, 3x volume + 1.5x buy/sell ratio triggers. Configured TP/SL/duration parameters per port.	\$200
Bot Cloning Scripts	Created clone_30min.py, clone_4043_variants.py, clone_cvt.py, setup_4043.py, setup_9023.py for rapid bot deployment with parameter variations.	\$150
	Category Subtotal	\$1,150

DOCUMENTATION & ONGOING MAINTENANCE

Task	Description	Market Value
Comprehensive System Documentation	Created CRYPTO_SYSTEM_DOCUMENTATION.txt (297 lines): all active ports, systemd services, databases, backup procedures, architecture.	\$250
Infrastructure Map & Credentials Document	Created INFRASTRUCTURE_MAP_AND_CREDENTIALS.txt: server access, API keys, dashboard access, hosting details, full service interaction diagram.	\$200
Disaster Recovery Guide	Created and maintained DISASTER_RECOVERY_GUIDE.txt with step-by-step server restoration procedures, backup locations, SHA256 checksums.	\$150
Ongoing Service Monitoring & Restarts	Multiple coordinated service restart cycles (39+ services with 30-second delays). RAM/swap management. OOM investigation. Process count optimization.	\$300
Client Communication & Technical Reports	Generated 16 detailed point-by-point technical reports. Port-by-port audit reports. Security incident analysis. Bug investigation reports.	\$200
	Category Subtotal	\$1,100

Financial Summary

	Amount
Total Estimated Market Value of Work Delivered	\$13,350.00
Total Paid by Client	\$499.00
Difference (Unpaid Work Value)	\$12,851.00
Payment as % of Market Value	3.7%

Valuation Methodology

Market values are estimated based on standard freelance rates for equivalent work on platforms including Freelancer.com, Upwork, and Toptal. Rates reflect the complexity, technical depth, and time investment required for each task. Factors considered include: custom Python/Flask development (\$50-100/hr), security incident response (\$100-150/hr), DevOps/infrastructure work (\$75-125/hr), e-commerce customization (\$40-80/hr), and ongoing maintenance/monitoring (\$40-60/hr). Values are conservative estimates representing the lower end of market rates for a developer with the required skill set.

This document is factual and based on verifiable work artifacts including: git history, systemd service files, Python source code modifications, backup files with SHA256 checksums, Freelancer.com message history, and client-verified confirmation documents (10_Points_Verified.docx, POINT 11_12_13_14.docx).
